Where is your card identity system most vulnerable?

Your card identity system faces threats from both external and internal sources — whether an employee printing unauthorized badges or a sophisticated counterfeiter. Just how vulnerable is your organization? And just how much time, money or even lives could be lost because of even one unauthorized ID card?

Five secure applications provide you with the protection you need.

With Print Security Suite you get user-friendly software that helps you control, monitor, maintain, and most importantly, upgrade the security of your card identity system.

Fargo SecureMark™ Technology powers the suite, creating a higher level of integrated security between your printer/encoder, software and materials.

Designed specifically for stand-alone Fargo printer/encoders, Print Security Suite is available in English, Spanish, French, German and Italian.

Your cards are only as secure as the system that produces them.

Depending on your desired level of protection, you can activate any combination of these five Print Security applications:

- Printer Access
- Print Notification
- Security Imaging
- Print Diagnostics
- Materials e-Ordering

Print Security Suite delivers a level of convenience and security that not only keeps you printing, it increases your protection.

Print Security Suite provides essential protection for stand-alone Fargo Card Identity Systems. To learn more, contact a Fargo SecureMark Integrator. Call 800-459-5636, or visit www.fargo.com/pss

SECUREMARK™
TECHNOLOGY

FARGO®

The World's Most Secure
Card Identity Systems

Activate any or all of these comprehensive applications for the appropriate level of print security that your organization needs.

Printer Access is an ideal solution to help protect against hard-to-detect internal security breaches. Administrators can alter the frequency of the password prompts to suit both their printing and security needs.

Printer Access

- Helps prevent printer misuse and unauthorized issuance of ID cards.
- Automatically disables a stolen or illegitimately accessed printer.
- Helps reduce both internal and external threats of fraud or misuse.
- Combined with Print Notification, it offers an effective deterrent to unauthorized users or counterfeiters.

When viewed under an ultraviolet light source, covert graphics and a unique number appear. This helps ensure the authenticity and enhance the security of your ID cards.

Security Imaging

- Covert features help deter counterfeiters and complicate ID fraud.
- Fargo Secure Fluorescing Ribbon enables covert printing of customized graphics that only appear under ultraviolet light.
- A covert number also provides authentication data on when and where a confiscated card was printed.

Fargo Print Notification allows users to customize the authorized hours of a printer's operation. An e-mail or text message notifies a system operator of an unauthorized print event.

Print Notification

- Provides round-the-clock notification of unauthorized printing.
- Can be scripted to trigger an alert by e-mail or text message to you and your staff.
- Effective as both a fraud deterrent and as a management tool for controlling hours of operation.

Print Diagnostics quickly gets you back to printing ID cards — and back to being secure.

Print Diagnostics

- Helps you quickly assess and fix printing issues.
- Reduces downtime and provides a fast and easy way to gather and share printer diagnostic information with your Fargo SecureMark Integrator.

Secure supplies are always just a convenient mouse click away.

Materials e-Ordering

- Enables quick and convenient online re-ordering.
- Eliminates downtime and the surprise of empty consumables by alerting you when levels are low.
- Provides part numbers and a direct online link to your Fargo SecureMark Integrator.

SECUREMARK TECHNOLOGY

Compatible Products

Print Security Suite is a highly recommended option for Fargo DTC400 and DTC550 Card Printer/Encoders in stand-alone card identity systems. Print Security Suite can add security imaging on the card, and control access to the printer/encoder, for comprehensive card issuance security.

For Print Security across a network, consider Fargo Print Security Manager.

DTC400
The unbelievably easy and secure way to print and encode plastic ID cards.

DTC550
Networking and security come together in an enterprise-class ID card printer.

Start here: the expertise and resources of a Fargo SecureMark Integrator.

Before you dive into a card identity system, consult with a Fargo SecureMark Integrator. They're the experts on building card identity systems, and integrating them with your security, access control, time-and-attendance and other systems. And they're the *only* people certified to provide Fargo products with SecureMark Technology.

ID card issuance affects the security of your entire organization. That's why you should depend on the knowledge and experience of a Fargo SecureMark Integrator.
